Re: Senior Site Reliability Engineer — Acme Cloud

Dear Acme Cloud hiring team,

I'm applying for the Senior SRE role. I operate Linux production systems and treat config drift as an incident class, not a mess to live with — details are in the resume (desired-state config, ~80% drop in that class of outage).

I'm in Nashville and open to Austin hybrid, which matches how I would use a South/senior track. I do not claim production Kubernetes; I will not pretend it.

Thank you for your time.

Sincerely,

Jordan Hale
