Jordan Hale

Senior Site Reliability Engineer | Linux fleets & config management

Nashville, TN | 555-0100 | jordan.hale@example.com | github.com/example-jordan

SUMMARY

Senior SRE with a decade operating Linux production fleets, on-call ownership, and config-as-source-of-truth. Cut a class of repeat drift outages about 80% by enforcing desired-state config instead of hand-edits. Python and Bash for production tooling. Open to Austin hybrid.

SKILLS

Production Linux: RHEL/Debian fleets, on-call, incident command, postmortems

Change & config: desired-state config, git as source of truth, change control

Automation: Python, Bash, observability (logs/metrics/paging)

EXPERIENCE

Site Reliability Engineer · ExampleCo

2014–2018 · Remote

• Reduced repeat config-drift outages ~80% by enforcing desired-state config on the Linux fleet instead of hand-edits.

• Owned paging and postmortems for a 24x7 Linux service; wrote the runbooks the next on-call actually used.

EDUCATION

B.S. Computer Science, State University (example)
